## Program Flowchart

- A flowchart is a diagram which shows the breakdown of an algorithm into all of the necessary steps and is an alternative to pseudo code
- A flow chart makes use of some standard shapes joined together by lines.
- Each step is represented by a symbol and connecting lines show the step-by-step progression through the task.

There are 5 symbols for constructing a program flowchart.
\(\left.$$
\begin{array}{|c|c|c|}\hline \text { Symbol } & \text { Name } & \text { Function } \\
\hline & \text { Start/end } & \begin{array}{l}\text { An oval represents a start } \\
\text { or end point. }\end{array} \\
\hline & \text { Input/Output } & \begin{array}{l}\text { A line is a connector that shows } \\
\text { relationships between the } \\
\text { representative shapes. }\end{array}
$$ <br>
\hline \& Process \& A parallelogram represents input <br>

or ouptut.\end{array}\right]\)| A rectangle represents a process. |

## Question 03:

A heating system is being controlled by sensors and a computer. The temperature must be kept between $15^{\circ} \mathrm{C}$ and $25^{\circ} \mathrm{C}$. If $30^{\circ} \mathrm{C}$ is exceeded a warning message is generated and the system shuts down.

A flowchart of the process is shown below. Some of the items are missing.
Complete the flowchart, using item number only, from the list of items given.

Question 03: Solution

(3 and 8 AND 4 and 7 MUST be marked in PAIRS) (accept the phrases)

## Question 04:

## Question 04: Solution

(NOTES: Additional $0 s$ in any column (UNLESS THEY ARE JUST THE REPEAT OF 0 VALUES) lose the mark for that column

If columns 1 to 7 are wrong there can be one mark for initialisation (000001) and a mark for the correct output $-3,6$ ).

## Question 05:

An algorithm has been written to check that code numbers are valid on input. They must be in the range 1000 to 9999 .

Five hundred codes are being entered and the percentage of entered codes which are incorrect is output.

There is a flowchart on the opposite page. It has some statements missing.
Complete the flowchart. Use statement numbers only, chosen from the list below.

| statement number | statement |
| :---: | :--- |
| 1 | Incorrect = Incorrect + 1 |
| 2 | INPUT Code |
| 3 | is Number < = 500 ? |
| 4 | is Code < 1000 ? |
| 5 | is Code > 9999 ? |
| 6 | Number = 1 |
